

Project Executable Files & Execution Guide

Date	15 July 2026
Team ID	SWUID2026234324
Project Name	VideoScriptAI – AI Powered Video Content Generator
Maximum Marks	3 Marks

Project Executable Files & Execution Guide:

To successfully evaluate your project, evaluators require access to your source code, live deployments, and clear instructions on how to build and run your application locally. Complete the sections below to document your project repositories and execution steps.

Step 1: Project Links & Access

Resource Type	URL / Access Link
Source Code Repository (e.g., GitHub, GitLab)	https://github.com/CountEva/VideoScriptAI
Live Deployed Application (e.g., Vercel, AWS, Heroku)	<i>(Runs Locally using Flask Development Server)</i>
Demo Video Link (Optional but recommended)	https://drive.google.com/file/d/1gFRxTGCxQI8Mnd6rt77KFKxeHy-1-i8E/view?usp=drive_link

Step 2: Key Executable Files & Folder Structure

Briefly explain the primary directories and where the core execution files are located within your repository.

S.No	Folder / File Name	Description & Purpose
1	<i>templates/index.html</i>	<i>Main frontend page containing the user interface for entering campaign details and displaying generated content.</i>
2	<i>static/css/style.css</i>	<i>Contains all styling for the web application.</i>
3	<i>static/js/script.js</i>	<i>Handles frontend interactions, API requests, and displays AI-generated responses.</i>
4	<i>app.py</i>	<i>Main Flask application containing API endpoints, Groq API integration, helper functions, and server execution logic.</i>

Step 3: Local Setup & Execution Instructions

Provide a step-by-step guide to installing dependencies and launching the application on a local machine.

Step	Action / Terminal Command	Expected Outcome / Notes
1	<i>git clone https://github.com/CountEva/VideoScriptAI.git</i>	<i>Downloads the project to the local machine.</i>
2	<i>cd VideoScriptAI</i>	<i>Opens the project directory.</i>

3	<i>python -m venv videoscriptai-env .\videoscriptai-env\Scripts\Activate.ps1 pip install -r requirements.txt</i>	<i>Creates and activates the virtual environment, then installs all required Python dependencies.</i>
4	<i>Create a .env file and add: GROQ_API_KEY=your_api_key_here</i>	<i>Configures the Groq API key required by the application.</i>
5	<i>python app.py</i>	<i>Starts the Flask development server. Open http://127.0.0.1:5000 in your browser to use the application.</i>
