Project Name	VideoScriptAI – AI Powered Video Content Generator
Maximum Marks	1 Mark

Scalability & Future Plan

Describe how the current solution can scale to handle increased load or users, and outline the features or enhancements planned for future releases.

Scalability

Aspect	Details
Current Architecture	Flask-based web application with a responsive HTML/CSS/JavaScript frontend integrated with the Groq API for AI-powered promotional content generation.
Scalability Approach	Deploy the application on a cloud platform (e.g., AWS, Azure, or Render), use a production WSGI server (Gunicorn), and implement load balancing and caching to support more concurrent users.
Expected Growth / Load	The solution is designed to support increasing numbers of users, businesses, and marketing campaigns with minimal architectural changes by leveraging scalable cloud infrastructure and external AI services.

Future Plan

S.No	Planned Feature / Enhancement	Target Timeline	Priority
1	User authentication and personal project history	Version 2.0	High

2	Export generated content to PDF and Word documents	Version 2.0	Medium
3	AI-generated storyboard images and video thumbnails	Version 2.0	High
4	Cloud deployment with user accounts and team collaboration features	Version 2.0	High
